SENSING THE FUTURE

Smart Monitoring as a solution for  
the Italian Infrastructure

# LET'S BE FRANK.

## Infrastructure monitoring isn't going all that well...

**Sadly**, that's what usually happens:

- Partial manual checks
- Late & scarce maintenance
- Erratic, not coherent data
- On-site human errors

# INFRASTRUCTURE FAILURES: TRAGIC CONSEQUENCES...

- Human life losses in case of tragic failures
- Shrinking ceilings for future public investments
- Increasing costs for rebuilding & future maintenance
- High costs & risks due to service disruptions

# INFRASTRUCTURE FAILURES: AN ENORMOUS COST FOR...

- Infrastructures owners
- Service operators
- Public administration
- Final customers & civil population

# HOW TO SAVE THE ITALIAN INFRASTRUCTURE

# COMPANY

## An innovation-focused company

Sensoworks is a young start-up, founded in 2020 as a spin-off of GreenVulcano Technologies, an Italian 20 y.o. experienced system integrator.

We built this project with a main goal: to **support companies in their journey towards digitization**. In particular, we want to help companies raise the correct infrastructure, focus their IT effort and choose the proper products for their budget and ambitions. We strongly believe in open source frameworks. In fact, our platform relies on them. **Big Data, predictive maintenance, edge computing and data visualization is what we deal with everyday.**

We received a great response on the market and secured strong relationships that helped us cooperate with brilliant companies into large international projects.

# VISION/MISSION

We started our company with one **vision** in mind: put all our skills, products and services at work to have infrastructures last longer, possibly even longer than the bridges and roads of Ancient Rome. We help customers Monitor, Control and Optimize their Infrastructure and Assets by offering them a Unique, Flexible and Agnostic platform.

Our **mission** is to work hard to develop the best product for monitoring human infrastructures, design it to be intuitive for each and everyone working in a company, and communicate it fiercely, to reach everyone out there. We want to be the leading provider of Data Intelligence and Asset Security.
