SENSING THE FUTURE

The transformation of modern cities  
from a linear to a circular model.

## Cities are responsible for...

- over 70% of global anthropogenic emissions
- 75% of the total consumption of natural resources
- 50% of global waste production
- and greenhouse gas emissions between 60-80%

# Linear vs Circular Economy

LINEAR ECONOMY

ECONOMY WITH FEEDBACK LOOPS

CIRCULAR ECONOMY

# From linear to circular economy

- Sensoworks IIoT Platform enables the transition from linear to circular economy
- Data ingestion, aggregation and analysis foster the comprehension of data collected from our cities (IoB)
